

Generator Maintenance Panels

Power Temp Systems' portable line of equipment is a dependable, affordable solution for situations where power is of critical importance.

Our generator maintenance panels allow a parallelable generator to be brought in and hooked into the parallelable generator on-site. Once paralleled, the main generator can be shut down and service performed while the other generator carries the load. This allows for zero-downtime maintenance intervals.

Standard Features:

- 200/400 to 600A configurations
- UL and cUL listed
- Will not void any generator manufacturers ULs
- Cam-Lok™ inputs
- Isolation breaker

Optional Features:

- Voltage test port
- Custom colors by request
